

Name of the material	Scale Model of the Solar System
Target group	9 – 12 and 13 – 15 year olds
The type of the material	A work instruction
Description	<p>The solar system models you've seen before probably don't show how much bigger some planets are than others, or, more importantly for space travel, how far away the planets are from the Sun and each other.</p> <p>In this activity, you will make two scale models of the solar system. The first model will compare the distance the planets are from the sun in astronomical units, the other model will compare the size of the planets using diameters in kilometers.</p>
